

I'm not robot

Continue

There isn't a demo for this app and that's a shame because it's really a good app. I bought it out of desperation when Apple killed the Glyph View character viewer in Lion, so I had to run Windows XP with Parallels Desktop just to work with the standard Windows character map app. Anyway, I found this app here does the job well, not much more, but nothing less. Both in terms of price and quality/UI I recommend it over PopChar X. The developer responds a lot and is updated frequently. He deserves his honor. However, it's a shame that we now have to use third-party software for this. There are many people who use a Mac in science, etc. Not just another character map. (Really.) Did you know that many fonts contain characters and images that are not accessible with the keyboard or even with a normal character palette? Ultra Character Map lets you access any character or glyph in any font and use it in other applications. It also allows you to side-by-side font comparisons, print font directories, view detailed character and font information (including typing combinations that produce special or accented characters), and more. And it's really easy to use. Main features: - Unlock everything your fonts have to offer. Access any character, symbol, or glyph in any font and use it in your documents. - Fun with colors and 3D effects. Create your own clip art by applying 3D colors and effects to any character, symbol, or glyph. - Say it in Emoji. Ultra Character Map gives you access to all Emoji characters available on macOS. To use an Emoji character, just drag or copy it to your document. - Compare fonts the easy way. Enter text once, and then just scroll through a list to see a preview in each font. Don't want to see all your fonts? You can filter the list by style, sort, collection, name, or font folder. Ultra Character Map allows you to preview header or paragraph text and includes predefined samples to save even more time. - Print font catalogs and sample fonts. Ultra Character Map lets you print custom font catalogs, font swatches, and character maps, or save them as PDF documents. - Useful tools for graphic design, webmasters and application developers. The Excellent Character Panel displays all the glyphs in your fonts (even not related to one character) and allows you to view Bézier curves and copy them to other applications. It also has an HTML entity palette, a Unicode 11.0 grid, and tables that display extensive character and font information. But wait, there's more. Ultra Character Map lets you select favorite fonts and characters, view characters or text copied from other applications, view keystrokes that produce specific characters (even if they require multiple steps, such as Option-N then Shift-N), and more. - Supports macOS 10.15 Catalina. - Copy character characters glyphs on the clipboard as SVG images. - Set the size of the character map sidebar font. - Adds new translations. - Performance improvements. - Other minor improvements. Introduced in version 2.1 - Supports the dark mode of macOS 10.14 Mojave. - Quickly select and compare fonts using the new Selected Fonts collection. - View alternate characters and glyphs associated with the selected character. - Supports svg color fonts in macOS 10.14 Mojave. - Supports MacBook Pro Touch Bar. - Fixes a problem with favorite fonts in macOS 10.14 Mojave. - Supports macOS 10.10 Yosemite. - Many more corrections and improvements. Introduced in version 2.0 - Enjoy a simplified, fully redesigned user interface. - Create your own clip art by applying 3D colors and effects to any character, symbol, or glyph. - Quickly browse your font library with the new font grid. - Explore the characters and glyphs of your fonts at the same time in the new Unified Characters & Glyphs view. - Take swift of any character or target-C escape sequence or UTF-8 byte sequence and easily copy it to the clipboard. - Browse the available variations of the selected Emoji character. - Print character maps that display the character code, glyph index, and glyph name of each character. - The Unicode grid was updated to Unicode 12.1. - Adds a new standard music font layout character map for SMuFL-compatible fonts. - Get easy access to your font files. - Performance improvements. - Other minor improvements.
